

Be seen better: The compact signal light CU2R ensures safety

The latest model from Ledlenser improves the visibility of pedestrians, cyclists and athletes

Solingen, April 2022 - **Ledlenser now brings more safety to everyday life and leisure with a small lamp: the CU2R signal light can be attached almost anywhere by clip or strap, e.g. on the upper arm, on clothing or on a backpack. With its white or red light, which can be set to constant or flashing, the lamp makes people more visible to other road users - whether out for a walk, doing sports or on the way to school.**

"At dusk, in a traffic jam, in dark clothing - there are many situations in which people can easily be overlooked. That's why we developed the CU2R as a safety tool for anyone who wants to be seen better when they're out and about, for example during a run in city traffic," says Philipp Elsner, Product Manager at Ledlenser. "Because the lamp is so small and handy, it fits in any pocket and is therefore also a helpful companion as an emergency light."

The CU2R is 37 mm long, 35 mm wide and 20 mm high. Including the battery, it weighs in at a light 25g. The mini light dispenser can be attached quickly and variably with the elastic strap or the metal clip. The lamp contains one white light LED and two particularly bright red light LEDs. Its operation is intuitive: white or red light can be set on two separate switches, each constant or flashing. The lamp is also suitable as an additional light when cycling. Runners can combine it with a headlamp like the ultra-light NEO1R to train regardless of the time of day or night. The CU2R contains a Li-ion battery that can be charged quickly and easily via Micro USB. The transport lock prevents it from being switched on unintentionally.
